

### PAZ 215/850 Pneumatic gear-wheel Fixture with 850-pole hyperbolic Intermediate Interface

The design of a standard Pneumatic gear-wheel Fixture series PAZ 100 was enhanced with a hyperbolic Intermediate Interface. The hyperbolic Intermediate Interface excels itself with a very low contact resistance (< 2 mOhm) which is achieved with a flexible spring bush that lays itself around the mating pin. Over 100,000 plug-in cycles are possible.

An optional version enables the Interface to be loaded with Test Probes and latched and unlatched by means of a toggle lever system.

A self-opening Pressure Frame Unit as well as a higher housing are also available as options.

#### Technical Data:

Contacting Force:	1.500 N
Usable Area:	270 x 155 mm

#### Ordering Information:

PAZ 215-1/D/H/850:	Art.-No. 26930
Replacement Kit:	Art.-No. 26931

Please request our product data sheets for more information about hyperbolic Interface Contacts.

Prices and delivery times on request.  
Technical changes possible.
